

Stick Laboratories of Xcellence invite you to join them for an evening seminar to see how Stick and everStick fibre reinforced Gradia composite restorations can help solve many clinical challenges.

During the evening you will discover how laboratory produced everStick fibre reinforced GC Gradia composites are used to make splints; maryland bridges; fixed, hybrid and cantilever bridges that can enhance your clinical options. The lecture will also cover Denture Reinforcement and many other useful indications for challenging cases.

You will also learn how these aesthetically beautiful, long-lasting and minimally invasive restorations can be a rewarding and cost-effective way of treating patients.

This lecture will provide attendees sufficient information to recognise and treat cases suitable for use with Stick and everStick fibre reinforced GC Gradia composites. The Dentist will have all the knowledge required to prescribe these types of restorations including the correct method of cementation.

During the evening you will have the opportunity to see examples of these restorations made with everStick and GC Gradia.

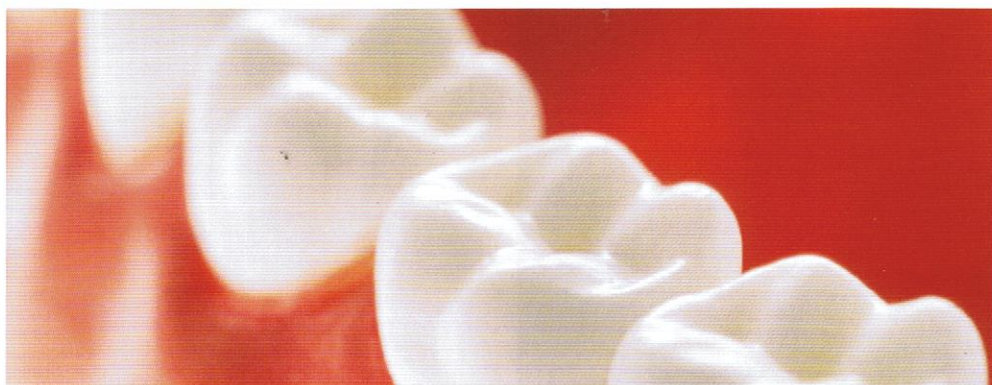

Registration 6.00pm
Lectures commence 6.30pm
Lectures close 8.00pm

The Stick Laboratories of Xcellence Seminars qualify for 1½ hours verifiable CPD.

Dentists £10 + VAT (£11.75 inc. VAT)
Nurses/Therapists £6 + VAT (£7.05 inc. VAT)

Your Assurance of Quality

To gain Xcellence standard, technicians from these laboratories have participated in theory and practical Master Classes at the GC European teaching centre in Leuven, Belgium and the Universities of Turku and Helsinki in Finland.

They have demonstrated that they understand and have the technical skills to design and produce beautiful long-lasting restorations to the highest standards. Technicians and their laboratories are reassessed every 2 years to ensure they deliver continuing high standards of technical knowledge and workmanship to the dental profession.

StickTech Laboratories of Xcellence organise evening lectures for dentists and their teams. The objectives of the seminar are to provide sufficient information to recognise the indications for Stick, everStick glass fibre splints and various restorations. Dentists will gain all the knowledge required to prescribe everStick and Stick prosthesis and correctly fit these for patients.
